

Merging Two Facebook Pages

(repeat as many times as needed)

Requirements:

- Must be under same Business Manager account
- Pages must have identical names
- Pages must represent the same business
- Physical addresses must be the same
- Pages cannot be global pages
- Cannot merge a verified page into a non-verified page
- Source: <https://business.facebook.com/help/249601088403018>
- Each merge will take a few days to complete, so this will be a process.
- Only this page: <https://www.facebook.com/craydlinc> has a username.
 - When you've finished your merging, if this page is not the one that has been kept, you will need to assign a username/custom URL to your facebook page so the address does not look like:
<https://www.facebook.com/profile.php?id=61554491606776>

To merge your pages:

Visit this page to request a merge:

<https://www.facebook.com/pages/merge/>

Be mindful of the fields in the form. The **FIRST PAGE** will be **DELETED**. The **SECOND PAGE** will be **KEPT**.

Choose a Source Page you want to Merge into a Destination Page

Source Page

Choose a Page

This page will be deleted after the Page Merge.

Destination Page

Choose a Page

This page will be preserved after the Page Merge.

Be sure to read the information at the bottom:

Things to remember:

You can only request a merge if you're an admin for both Pages.

The Pages you merge must represent the same thing and have identical names.

Merging Pages can't be undone once you've started the process.

People who like the source Page will be informed of the merge. This may take a few days to complete.

Content from the merged Page, such as posts, photos and the username, will be deleted during the merge. [Learn how to download and save your Page content](#)

For more info, see our guidance for [Pages Merge](#).
